Good morning:

This email is my public comment regarding the proposed WP&P 22-101(2) Replacement Point of Diversion language.

The only suggestion I have would be to reduce the OE response time for change requests from 60 days to 30 (or even 45) days. Today's projects are always under severe delivery schedules or have other time pressures. Any little bit can help a lot. That's just my view from this side of the fence.

Thanks!

Paul Bishop
